## INSTRUCTIONS:

1. This examination consists of a total of 10 different pages. The problems $(1-11)$ on pages 2 - 5 make-up the 4th exam, while the problems ( $12-23$ ) on pages $6-8$ are the final exam. The last two pages includes useful information and a periodic table. All work should be done in this booklet.
2. PRINT your name, section number and T.A.'s name now in the space at the top of this sheet. DO NOT SEPARATE THE PAGES.
3. Answer all questions that you can and whenever called for show your work clearly. The approach used to solve stoichiometry problems must pattern the approach used in lecture.
4. Show your work on Problems 3, 4, 9 - 12, 20, 22 and 23.
5. Point values are shown next to the problem number.
6. Budget your time for each of the questions. Some problems may have a low point value yet be very challenging. If you do not recognize the solution to a question quickly, skip it, and return to the question after completing the easier problems.
7. Look through the exam before beginning; plan your work; then begin.
8. Relax and do well.
