## VAPOR PRESSURE

## Name

Section

1. Consider the sketches of four barometers. Barometer i shows the measurement of atmospheric pressure. Barometer ii depicts the situation of a sample of water having been injected into the tube. Barometer iii and iv depict samples of diethyl ether having been injected into the tubes. All four barometers are at the same temperature.

a. Why does the height of the mercury column change when liquids are injected?
b. What is the equilibrium vapor pressure of diethyl ether?
c. What is the pressure of the diethyl ether vapor in barometer iv?
d. Based on your answers in band c , what mass of diethyl ether, compared to that in barometer iii, was originally injected into barometer iv? (Note: Answer more than, less than, or the same amount as.)
e. Complete barometer iv by carefully sketching in the space above the mercury level in the tube symbols (dots) which correctly represent the phase(s) present.
f. Using your answers for cthrough e, explain what happened when the sample of diethyl ether was originally injected into barometer iv.

# VAPOR PRESSURE AND TEMPERATURE 

## Name

Section

1. Using the information on the graph below, explain how a change in temperature of a liquid effects its vapor pressure.

2. Write the Clausius-Clapeyron equation in the space below and define each term.
3. Given that the vapor pressure of ammonia is 164 mmHg at $-56^{\circ} \mathrm{C}$, calculate the vapor pressure at $-45^{\circ} \mathrm{C} . \Delta \mathrm{H}_{\text {vap }}^{\circ}=28.0 \mathrm{~kJ} / \mathrm{mol}$.
4. Calculate the normal boiling point of ammonia knowing the vapor pressure at $-38^{\circ} \mathrm{C}$ is 538 mmHg . $\Delta \mathrm{H}_{\text {vap }}^{\circ}=28.0 \mathrm{~kJ} / \mathrm{mol}$.
5. Using the vapor pressure data for acetic acid, $\mathrm{CH}_{3} \mathrm{COOH}(l)$,

| $\mathrm{t}\left({ }^{\circ} \mathrm{C}\right)$ | $\mathrm{P}_{\mathrm{v}}(\mathrm{mmHg})$ |
| :---: | :---: |
| 10.0 | 6.00 |
| 20.0 | 11.6 |
| 30.0 | 21.3 |
| 40.0 | 37.3 |
| 50.0 | 63.7 |

complete the table below and plot $\ln \left(\mathrm{P}_{\mathrm{v}}\right)$ vs. $1 / \mathrm{T}(\mathrm{K})$ on your calculator. Use your graph to estimate the heat of vaporization of acetic acid. (Note: $\ln$ is the natural log function.)

| $\mathrm{T}\left({ }^{\circ} \mathrm{C}\right)$ | $\mathrm{T}(\mathrm{K})$ | $1 / \mathrm{T}(\mathrm{K})$ | $\mathrm{P}_{v}(\mathrm{mmHg})$ | $\ln \left(\mathrm{P}_{v}\right)$ |
| :---: | :---: | :---: | :---: | :---: |
| 10.0 | 283 |  | 6.00 |  |
| 20.0 | 293 |  | 11.6 |  |
| 30.0 | 303 |  | 21.3 |  |
| 40.0 | 313 |  | 37.3 |  |
| 50.0 | 323 |  | 63.7 |  |

## INTERMOLECULAR ATTRACTIVE FORCES

## Name <br> Section

1. Sketch the orientations of molecules and/or ions involved in the following intermolecular attractive forces. Include at least one specific example where each attractive force is important. For each one, tell what causes the force and describe its strength relative to the others.
a. ion-dipole forces
b. dipole-dipole forces
c. London dispersion forces
d. hydrogen-bonding forces
2. Complete the following table:

| System | Primary Intermolecular Force | Sketch of Interaction Between <br> Particles |
| :---: | :---: | :---: |
| $\mathrm{CH}_{2} \mathrm{Cl}_{2}(\mathrm{l})$ |  |  |
| $\mathrm{NH}_{3}(\mathrm{l})$ |  |  |
| $\mathrm{SO}_{2}(\mathrm{l})$ |  |  |
| $\mathrm{KBr}(\mathrm{s})$ |  |  |
| $\mathrm{I}_{2}(s)$ |  |  |
| $\mathrm{CH} \mathrm{CH}_{2} \mathrm{OH}(a q)$ |  |  |
| $\mathrm{NaCl}(a q)$ |  |  |

1. Describe the difference between atomic, molecular, ionic, and covalent solids. Include comparisons of physical properties, such as melting points, as well as types of intermolecular forces present.
2. Define the term "unit cell" and sketch the unit cell for simple cubic, body-centered cubic, and facecentered cubic crystals.
3. Complete the following table:

| Unit Cell | Number of <br> Corner Atoms | Number of <br> Edge Atoms | Number of <br> Face Atoms | Number of <br> Atoms Entirely <br> Within the <br> Cell | Total Number <br> of Atoms in <br> Unit Cell |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Simple cubic |  |  |  |  |  |
| Body-centered <br> cubic |  |  |  |  |  |
| Face-centered <br> cubic |  |  |  |  |  |
