

CHEM 1515.001 - 006  
Exam III  
John III. Gelder  
April 16, 2002

Name \_\_\_\_\_

TA's Name \_\_\_\_\_

Section \_\_\_\_\_

### INSTRUCTIONS:

1. This examination consists of a total of 8 different pages. The last three pages include a periodic table, a table of equilibrium constants, a solubility table and some useful equations. All work should be done in this booklet.
2. PRINT your name, TA's name and your lab section number now in the space at the top of this sheet. DO NOT SEPARATE THESE PAGES.
3. Answer all questions that you can and whenever called for show your work clearly. Your method of solving problems should pattern the approach used in lecture. You do not have to show your work for the multiple choice or short answer questions.
4. No credit will be awarded if your work is not shown in 3, 5 and 6.
5. Point values are shown next to the problem number.
6. Budget your time for each of the questions. Some problems may have a low point value yet be very challenging. If you do not recognize the solution to a question quickly, skip it, and return to the question after completing the easier problems.
7. Look through the exam before beginning; plan your work; then begin.
8. **Relax** and do well.

|        | Page 2      | Page 3      | Page 4      | Page 5      | TOTAL        |
|--------|-------------|-------------|-------------|-------------|--------------|
| SCORES | <u>(26)</u> | <u>(16)</u> | <u>(36)</u> | <u>(22)</u> | <u>(100)</u> |

- (12) 1. Write the chemical formula(s) of the product(s) and balance the following reactions. Identify all products phases as either (g)as, (l)iquid, (s)olid or (aq)ueous. Soluble ionic compounds should be written in the form of their component ions.

- (4) 2a. Write the ionic and net ionic chemical equation for 1a), 1b), 1c) or 1d).

Ionic equation

Net Ionic equation

- (10) 3. At high temperature HCl and O<sub>2</sub> react to give Cl<sub>2</sub> gas:

2.30 atm of HCl and 1.00 atm of O<sub>2</sub> are introduced into a container at 750 K. After equilibrium is established the partial pressure of Cl<sub>2</sub> is found to be 0.93 atm. Calculate K<sub>p</sub> for the reaction.

(12) 4. The following exothermic reaction is at equilibrium

Predict what happens to the amount of  $\text{SO}_3$  when each of the following changes is made. Provide a brief explanation for your prediction.

- a) The temperature is raised.
  
  
  
  
  
  
- b) More  $\text{O}_2$  is added.
  
  
  
  
  
  
- c) The volume of the container is increased.

(4) 5.  $K_c$  for the reaction

is  $3.39 \times 10^{-8}$  at 1000 K. Calculate  $K'_c$  for the reaction

(36) 6. Calculate the pH for each of the following solutions.

(22)7a. Write a chemical equation to describe how each of the following behave as acids when dissolved in water. (4)

a) Given solutions of the same concentration which acid in part a) is the strongest? Support your answer with a short explanation. (4)

b) Given solutions of the same concentration which base  $\text{F}^-$  or  $\text{CHO}_2^-$  is the strongest? Support your answer with a short explanation. (4)

c) Write a neutralization reaction between the strongest acid from part b) and the strongest base in part c). (4)

d) Does  $\text{Na}_2\text{HPO}_4$  behave as an acid or base when added to water? Explain. (6)

# Periodic Table of the Elements

| IA |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    |                    | VIIIA              |                        |                    |
