

CHEM 1515.001 - 006  
Exam **IV**  
John IV. Gelder  
May 6, 2002

Name \_\_\_\_\_

TA's Name \_\_\_\_\_

Section \_\_\_\_\_

### **INSTRUCTIONS:**

1. This examination consists of a total of 9 different pages. The last three pages include a periodic table, a table of a solubility table, a table of equilibrium constants for acids and bases and a table of standard reduction potentials. All work should be done in this booklet.
2. PRINT your name, TA's name and your lab section number now in the space at the top of this sheet. DO NOT SEPARATE THESE PAGES.
3. Answer all questions that you can and whenever called for show your work clearly. Your method of solving problems should pattern the approach used in lecture. You do not have to show your work for the multiple choice or short answer questions.
4. No credit will be awarded if your work is not shown in 3, 4, and 5.
5. Point values are shown next to the problem number.
6. Budget your time for each of the questions. Some problems may have a low point value yet be very challenging. If you do not recognize the solution to a question quickly, skip it, and return to the question after completing the easier problems.
7. Look through the exam before beginning; plan your work; then begin.
8. Relax and do well.

	Page 2	Page 3	Page 4	Page 5	Page 6	TOTAL
SCORES	(25)	(24)	(26)	(16)	(9)	(100)

- (9) 1. Write the chemical formula(s) of the product(s) and balance the following reactions. Identify all products phases as either (g)as, (l)iquid, (s)olid or (aq)ueous. Soluble ionic compounds should be written in the form of their component ions.

- (4) 2a. Write the ionic and net ionic chemical equation for 1a), 1b) or 1c).

Ionic equation

Net Ionic equation

- (12) 3. A solution is prepared by mixing 100. mLs of 0.200 M  $\text{HC}_3\text{H}_5\text{O}_2$  and 100. mLs of 0.220 M  $\text{NaC}_3\text{H}_5\text{O}_2$ .

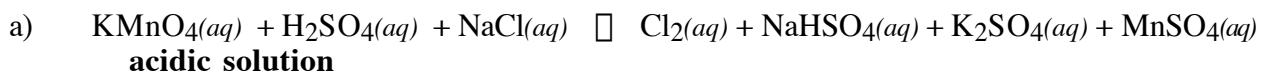

- a) Calculate the pH of the solution.

(24) 3. CONTINUED

b) Calculate the pH after adding 0.00400 mol of HCl to the solution in part a). (Assume no change in the volume of solution)

c) Calculate the pH of the solution after adding 0.0200 mol of NaOH to the solution in part a). (Assume no change in the volume of solution)

(14) 4. Balance the following oxidation-reduction reaction using the half-reaction method.

identify the oxidizing agent \_\_\_\_\_

identify the reducing agent \_\_\_\_\_

(12) 5. Write the chemical formula(s) of the product(s) and balance the following spontaneous reactions.

(16) 6. Given the electrochemical cell shown in Figure I.

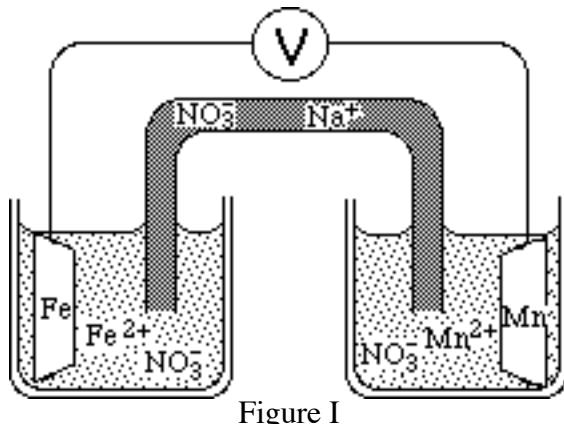

Figure I

- Write the balanced net ionic equation for the spontaneous reaction that occurs as the cell operates.
- Determine the standard cell voltage,  $E^\circ$ .
- Describe (use a diagram if you like) what is happening at the submicroscopic/atomic level on the surface of the anode in the cell.
- Indicate the direction of flow of the ions in the salt bridge. (Be sure the anode and cathode compartments are identified.)

(9) 7. Short answer.

- a) The standard reduction potential for the reduction of  $\text{RuO}_4^-$  to  $\text{RuO}_4^{2-}$  is +0.59 volts. Which of the following substances can oxidize  $\text{RuO}_4^{2-}$  to  $\text{RuO}_4^-$  under standard condition?

Write the balanced chemical equation to support your choice.
